

Davalen RapidValue Services: Lotus® Expeditor

Maximize the Power of Business Collaboration with Lotus Software and Davalen

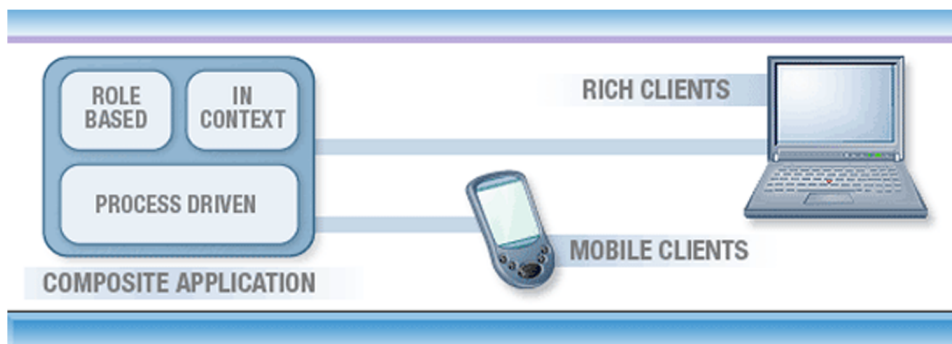

Since 1993, Davalen has been helping clients architect, customize, and accelerate their Lotus software infrastructures. As a Premier IBM Business Partner, Davalen is able to provide consulting and training services with a certified and experienced staff. Our consultants and instructors have worked in many different industries and can create a customized solution for your largest development and administration needs. Along with experience comes a drive for leading edge technology. Davalen's staff can help your organization venture into newer areas such as XPages, Expeditor, and Lotus Connections.

What is Lotus® Expeditor?

Lotus® Expeditor is a desktop integration framework for providing intelligent client access to virtually any data source. IBM Lotus Notes V8.5 is built on Lotus® Expeditor. Because of this, the Lotus Notes client can serve as an integration hub. Lotus Notes plug-ins, written using the features available with the Lotus Expeditor plug-in for Eclipse, help improve employee productivity and business responsiveness by providing a composite desktop that integrates and aggregates multiple business processes.

How Davalen Can Help?

Writing Lotus Notes plug-ins using Eclipse and Lotus® Expeditor requires a good understanding of many features that are new to Lotus Notes 8.5. Davalen is only one of a couple of IBM Partners that have deployed Lotus® Expeditor plug-ins on a large scale. We understand how to write and deploy plug-ins that integrate custom live text with enterprise data. Davalen can provide turn-key plug-in development services or mentor your developers through the process.

Using Lotus® Expeditor software, you can deploy applications that integrate a variety of components within a single composite view for end users.
